Cognizant Named a Verified Services Partner for Automation Anywhere

Cognizant is among the select partners to be a Verified Services Partner for Automation Anywhere (AA), a global company that develops robotic process automation software.

Recognizing partners who have demonstrated deep technical expertise with successful deployments, the AA Verified Services Partner program enables AA clients to identify and work with qualified service partners. These partners possess the required competencies and capabilities to help them accelerate their digital transformation initiatives.

Among our many AA projects, we helped a leading international agricultural and food company streamline its largely manual and fragmented order fulfillment, financial reporting and customer care processing. The project resulted in:

- $20 million in savings.
- More than 90% process improvement.
- Four times the return on investment.

“Cognizant’s Intelligent Process Automation practice combines advisory services with deep vendor partnerships and integrated solutions to create and execute strategic roadmaps for businesses across industries,” said Girish Pai, Global Head, Intelligent Process Automation Practice, Cognizant. “Our long-standing relationship with Automation Anywhere has allowed us the opportunity to help many of our clients realize the full potential of IPA. We look forward to our continued work with them as a Verified Services Partner.
