Cognizant's TriZetto Achieves SOC 2® Type II Compliance

Cognizant's TriZetto® Connected Health Solutions is a SaaS-based healthcare platform and has completed its Service Control (SOC) 2 Type II certification. SOC 2® is an auditing standard developed by the American Institute of Certified Public Accountants (AICPA) and indicates that an organization maintains a high level of information security around sensitive information and data.

Achieving SOC 2® Type II certification validates that Cognizant's TriZetto SaaS platform has strong security, privacy, confidentiality, and processing controls to safeguard customer data. SOC 2® aligns with industry best practices, such as the Trust Services Criteria (TSC) developed by the AICPA, which is a mandatory regulation in the healthcare industry.

"Achieving SOC 2® Type II compliance is a significant milestone in our endeavor to provide secure solutions to our customers that conform to industry standards and regulations," said Robert Wise, Cognizant TriZetto Chief Information Officer. "Our clients and the industry require that we do everything in our power to safeguard privacy and data, and the validation from the AICPA confirms that our protocol and initiatives are working."
