Cognizant Awarded “Modernize Endpoints” specialization from Microsoft

The Cognizant Microsoft Business Group (MBG) has been awarded the “Modernize Endpoints” specialization from Microsoft. The group, well experienced in strengthening Cognizant’s Microsoft Cloud capabilities, has now received 16 such advanced specializations.

Microsoft grants specializations to partners that deliver differentiated, expert solutions to the technological needs of their clients. The Modernize Endpoints specialization recognizes firms who repeatedly deliver successful solutions for a hybrid workplace. This is one of Microsoft’s newest specializations, created to address the lasting changes of the COVID-19 pandemic.

“The rise in hybrid work means organizations must manage and enable secure access to corporate resources across mobile and virtual endpoints to better support their workforce. This includes devices users need, operating systems that are secure by design, endpoint management solutions and universally-accessible collaborative applications,” said Matt Joe, Global Solutions Lead of the Cognizant MBG. “We are proud to have earned this recognition by Microsoft for our cooperative efforts in delivering and scaling innovative solutions for an ever-changing workplace environment.”
